Issa Sarhan

Full stack Developer | Mobile Developer   +   96170958117,   isasarhan.lz@gmail.com

Beirut, Lebanon   [LinkedIn](), [GitHub]()

Career Summary

I have over three years of experience as a WordPress developer, focusing on website development and customization. Now transitioning to Next.js and Node.js, I aim to leverage modern technologies for scalable and efficient web applications. My strong foundation in web development principles from WordPress will support my growth in frontend and backend development with Next.js and Node.js, enabling me to contribute effectively to innovative projects.
Fluent in English and Arabic

Education

Bachelor's in Computer Science   2022

Lebanese University, Beirut, Lebanon

Projects

Front-end:

Gold Factory Management System UI (Next js)

- developed a secure website where only authorized users can access it after registering
- designed with bootstrap and MUI
- made custom components (table where data fetched from database can be displayed easily, pagination functionality ,etc.)
- added ability to add, manage and update customers, balances, displaying invoices, adding multiple payments and orders.
- cached data not frequently fetched to enhance speed
- Deployed to vercel

Back-end:

Gold Factory Management System API (Node, Express, mongodb)

- Restful Api made with mvc architecture managing customer info, orders, balances, and payments with ability to get invoices
- All customer balances are connected to an inventory to manage gold in and out of factory
- Used authentication (jwt and password encryption), authorization and uploading middlware
- Collaborated with a team to deliver new features and enhancements, meeting tight deadlines and ensuring high-quality code.
- Deployed to render

WordPress:

- Book management plugin with CRUD functionalities made with boilerplate framework
- Developed Floating Social Media Icons Plugin
- Made Custom Post Type Plugin
- Programmed Nafath API Integration Plugin
